

The compact Digicam that really stands out

Whether you use it as a high-quality Webcam, a camcorder to record impressions of your vacation, or for razor-sharp snapshots, the 2move 1.3 is a complete digital camera in shirt-pocket format. Just plug it in, take it along and start. With a resolution of 1.3 megapixels, this compact megapixel-class digicam delivers first-class results for its size. The internal 16 MB flash memory offers enough storage for up to 400 pictures (VGA), or five minutes of video (QVGA) when using the 2move 1.3 as a camcorder.

Was that the wrap? Then simply connect the USB cable and transfer the images to your PC. The included software package will turn your PC into a powerful photo and video studio. Present your shots in the best possible light. With Medi@Show, you can put together impressive multimedia slide shows in just a few clicks—for your website, as a screensaver, or as a surprise e-mail for your friends and relatives. Photo Express 4.oSE gives you everything you need for professional image editing. And to ensure that you never lose track of your personal photo collection, Photo Explorer will help you organize it in an instant.

Naturally, suitable Webcam software is also included: VideoLive Mail, for example, a versatile program that lets you record your own video clips with sound, save them in space-saving compressed formats and send them across the Internet at the click of a button.

Technical Details:

- 1/2" colour sensor 1280 x 1024
- Focal range 1m to infinity
- Focal length $f = 9,86\text{mm}$
- Lens aperture $F 3.0$
