

DESCRIPTION

SINE SLE 82

8 Channel Stereo Line Mixer

Does your keyboarder need a preliminary mix of his synthesizers on stage? Would you like to organize your studio mixing desk by grouping your synthesizers? Does your guitarist want to get a handle on his effects devices? And do you want to solve all of these problems with a device that takes up as little space as possible? Then TerraTec's rack mixers are the perfect solution.

The model SINE SLE 82 has eight input channels (or 4 stereo pairs), two outputs, a master volume control and one volume and balance control per input pair. In addition, the SLE 82 features an effects loop with stereo return — with a rotary control for each channel, of course.

And because good racks are expensive and space in them is always in short supply, we fit all of these features into a 1U 19" housing. We didn't sacrifice quality to achieve this, however. With a signal-to-noise ratio of >97 dB and a frequency response of 20 Hz – 20 KHz, noise isn't an issue and signals pass through the mixer without losses.

- 4 stereo channel pairs with a total of 8 inputs and 2 outputs
- Effects loop with stereo return, adjustable for each channel
- Volume and balance controls for each input channel pair
- Master volume
- Signal-to-noise ratio > 97 dB
